

With NUVISION EnterpriseArchitect your team obtains an all-inclusive, multi-user environment for creating and managing the artifacts needed to design all enterprise dimensions and perform gap analysis. NUVISION EnterpriseArchitect interlinks architecture dimensions with each other, which enables users to conveniently identify how changes affect other dimensions. It will also help organizations to accurately assess the business criticality of proposed IT investments.

NUVISION EnterpriseArchitect is part of the NUVISION Business Operating System, a set of business management software for operational excellence and strategy execution widely used by both public and private organizations. NUVISION has been listed in leading Enterprise Architecture and Enterprise Business Process Analysis (EBPA) industry analyst listings

WHAT IS NUVISION ENTERPRISE ARCHITECT?

WHY SHOULD MY BUSINESS USE NUVISION ENTERPRISE ARCHITECT?

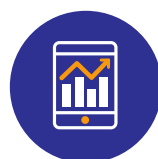

Invest in just one tool to document, analyze, and streamline operations using multiple levels and dimensions

Save time and increase efficiency with improved communication and collaboration

Fast deployment with either a flexible and open metamodel, or readily available standards and frameworks

Supports your organization's digital business transformation

ENABLE EFFICIENT DECISION MAKING

NUVISION Enterprise Architect offers a range of analytical features to support decision making. Model comparison shows the gaps between a current architecture and a future one. NUVISION Enterprise Architect change impact analysis reports help in understanding how change in one part of the architecture affects others. NUVISION Enterprise Architect can be linked to your key performance indicators in order to monitor how fast your EA initiatives can be rolled out. Performance indicators and attributes, indication of intent, and cost attributes can be assigned to modeling objects like applications and technology platforms.

TAILOR THE EA METHOD TO YOUR NEED

A completely open metamodel allows NUVISION Enterprise Architect users a flexible approach to enterprise architecture modeling. At the same time it also supports, with unmatched usability, many frameworks and standards such as TOGAF®, Zachman, ArchiMate®, and BPMN as well as NUVISION's enterprise architecture based operational development methodology. Further customization of the notation, viewpoints, catalogs, diagram types, and matrix views is easy and safe, and does not require your organization to use external services

COLLABORATION AND REPORTING

Modeling and designing with NUVISION Enterprise Architect is made easy as it enables different users to work independently on different Enterprise Architecture dimensions and combine those later. User profile based differentiated access can be provided to different classes of information. With NUVISION Portal, users can browse models, generate and share online reports, schedule reports, and export information to Microsoft Office tools. The NUVISION Portal can be used as a communication channel to both restricted user groups and larger public communities. Commenting is also easy by using web forms. Both the client and the web-based portal can be used as a presentation tool, with navigation between dimensions and layers

NUVISION ENTERPRISEARCHITECT KEY FEATURES

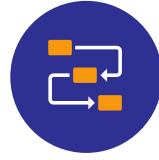

Covers all EA layers and dimensions

Analyze assets' mutual relationships and dependence

Supports standards and frameworks such as ArchiMate®, TOGAF®, BPMN, UML, and APQC

Comes with a business oriented and pragmatic TOGAF® based NUVISION Operational Development Methodology template
